## Statement on the Modification of Specification & CoA

to whom it may concern

### ASTACOS<sup>®</sup> OL50

We would like to inform you, that we have made some changes in our Specification and Certificate of Analysis (CoA) for our product ASTACOS<sup>®</sup> OL50. As part of our ongoing quality assurance and product evaluation, we have decided to remove the peroxide value from the product specification. This adjustment is necessary due to technical limitations in accurately measuring this value.

The peroxide value cannot be measured in a standard-compliant way due to the product's strong natural color interferes with the measurement. Additionally, any required pre-treatment for the measurement would alter the peroxide value itself, leading to inaccurate results.

To ensure the quality of our product, we closely monitor that the peroxide value of the carrier oil we source remains below 5 mEqO<sub>2</sub>/kg. This guarantees that we use high-quality raw materials, ensuring the safety and stability of our final product.

This change does not impact the quality or safety of our product. Our high standards remain intact, and we continue to maintain strict internal controls.

Sincerely,

Paul Blaschitz, Managing Director
